

# Responsible Steps Program

## Trying Proven Drugs First

### Frequently Asked Questions

#### What does Responsible Steps mean?

Responsible Steps is commonly referred to as Step Therapy. Step Therapy is the practice of beginning drug therapy for a medical condition with the most cost-effective and safest drug and then progressing to other more costly drugs, only if necessary.

#### Why does my prescription drug plan require that I try certain drugs first?

Some drugs have FDA approved alternative drugs that have been proven effective and cost less. Your plan's Responsible Steps program promotes the safe and effective use of these medications: helps reduce accidental misuse and health risks, and helps save you money on your prescriptions.

#### What will happen when I fill my prescription at the pharmacy?

When the pharmacist enters your prescription into the system, it automatically checks your claim history before authorizing the

pharmacy to fill the prescription. If you've tried the alternative drugs and your doctor still wants you to use one of the drugs listed in the program, the prescription will be filled. If you haven't tried the alternatives, the pharmacy will ask you to discuss it with your doctor. The doctor can either prescribe an alternative or request an exception from us.

#### How can I make sure my medication is covered before I go to the pharmacy?

When your doctor gives you a prescription, ask for a generic drug. Most generic drugs are covered automatically. Before you go to the pharmacy, you can use your mobile phone or computer to look up drugs online at [floridablue.com](http://floridablue.com). You can look up a drug; see if a drug is covered, tell if the drug requires an approval before it's covered, and compare prices at different pharmacies!

#### What are the Responsible Steps medications that have alternative drugs that must be tried first?
